ABOUT THIS MANUAL

Notice

The purchased products, services and features are stipulated by the contract made between supplier and the customer. All or part of the products, services and features described in this document may not be within the purchase scope or the usage scope. Unless otherwise specified in the contract, all statements, information, and recommendations in this document are provided "AS IS" without warranties, guarantees or representations of any kind, either express or implied.

The information in this document is subject to change without notice. Every effort has been made in the preparation of this document to ensure accuracy of the contents, but all statements, information, and recommendations in this document do not constitute a warranty of any kind, express or implied.

Purpose

This manual describes the assembly, installation, operation and troubleshooting of this unit. Please read this manual carefully before installations and operations. Keep this manual for future reference.

Scope

This manual provides safety and installation guidelines as well as information on tools and wiring.

Take a look at a practical instructional video on how to connect an offgrid SINUS PRO ULTRA-HV inverter: https://www.youtube.com/watch?v=loKn3noDPzo&ab_channel=Elektrykapradnietyka

The following cases are not within the scope of warranty

1. Out of warranty.
2. Series number was changed or lost.
3. Battery capacity was declined or external damaged.
4. Inverter was damaged caused of transport shift, remissness, ect external factor
5. Inverter was damaged caused of irresistible natural disasters.
6. Not in accordance with the electrical power supply conditions or operate environment caused damage.

SAFETY INSTRUCTIONS

⚠ **WARNING: This chapter contains important safety and operating instructions. Read and keep this manual for future reference.**

1. Before using the unit, read all instructions and cautionary markings on the unit the batteries and all appropriate sections of this manual.
2. **CAUTION** --To reduce risk of injury, charge only deep-cycle lead acid type rechargeable batteries. Other types of batteries may burst, causing personal injury and damage.
3. Do not disassemble the unit. Take it to a qualified service center when service or repair is required. Incorrect re-assembly may result in a risk of electric shock or fire.
4. To reduce risk of electric shock, disconnect all wirings before attempting any maintenance or cleaning. Turning off the unit will not reduce this risk.
5. **CAUTION** --Only qualified personnel can install this device with battery.
6. **NEVER** charge a frozen battery.
7. For optimum operation of this inverter/charger, please follow required spec to select appropriate cable size. It's very important to correctly operate this inverter/charger.
   Due to the nature of the device (high-voltage solar controller), the fans run continuously, this is normal condition.
8. Be very cautious when working with metal tools on or around batteries. A potential risk exists to drop a tool to spark or short circuit batteries or other electrical parts and could cause an explosion.
9. Please strictly follow installation procedure when you want to disconnect AC or DC terminals. Please refer to INSTALLATION section of this manual for the details.
10. Fuses (1 piece of 150A, 63VDC for 5.2KW and 1 piece of 200A, 63VDC for 3KW) are provided as over-current protection for the battery supply.
11. GROUNDING INSTRUCTIONS- This inverter/charger should be connected to a permanent grounded wiring system. Be sure to comply with local requirements and regulation to install this inverter.
12. NEVER cause AC output and DC input short circuited. Do NOT connect to the mains when DC input short circuits.
13. **Warning!!** Only qualified service persons are able to service this device. If errors still persist after following troubleshooting table, please send this inverter/charger back to local dealer or service center for maintenance.

INTRODUCTION

This is a multi-function inverter/charger, combining functions of inverter, solar charger and battery charger to offer uninterruptible power support with portable size. Its comprehensive LCD display offers user-configurable and easy-accessible button operation such as battery charging current, AC/solar charger priority, and acceptable input voltage based on different applications.

Features

Pure sine wave inverter

Configurable input voltage range for home appliances and personal computers via LCD setting

Configurable battery charging current based on applications via LCD setting

Configurable AC/Solar Charger priority via LCD setting

Compatible to mains voltage or generator power

Auto restart while AC is recovering

Overload/ Over temperature/ short circuit protection

Smart battery charger design for optimized battery performance

Cold start function

Basic System Architecture

The following illustration shows basic application for this inverter/charger. It also includes following devices to have a complete running system:

Generator or Utility.

PV modules (option)

Consult with your system integrator for other possible system architectures depending on your requirements.

This inverter can power all kinds of appliances in home or office environment, including motor-type appliances such as tube light, fan, refrigerator and air conditioner.

Figure 1 Hybrid Power System

Product Overview

**5.2KW parallel model**

5.2KW single model

3KW parallel model

3KW single model

1. LCD display
2. Status indicator
3. Charging indicator
4. Fault indicator
5. Function buttons
6. Power on/off switch
7. AC input
8. AC output
9. PV input
10. Battery input
11. Circuit breaker
12. RS485 communication port
13. Parallel communication port
(only for parallel model)
14. Parallel switch
15. Dry contact
16. USB
17. USB WIFI

INSTALLATION

Unpacking and Inspection

Before installation, please inspect the unit. Be sure that nothing inside the package is damaged. You should have received the following items inside of package:

The unit x 1
User manual x 1
USB cable x 1

Preparation

Before connecting all wirings, please take off bottom cover by removing two screws as shown below.

(3K)　　　　　　　　　　　　　　　(5.2K)
Mounting the Unit

Consider the following points before selecting where to install:

- Do not mount the inverter on flammable construction materials.
- Mount on a solid surface.
- Install this inverter at eye level in order to allow the LCD display to be read at all times.
- For proper air circulation to dissipate heat, allow a clearance of approx. 200 mm to the side and approx. 300 mm above and below the unit.
- The ambient temperature should be between 0c and 55c to ensure optimal operation.
- The recommended installation position is to be adhered to the wall vertically.
- Be sure to keep other objects and surfaces as shown in the diagram to guarantee sufficient heat dissipation and to have enough space for removing wires

At least 300mm

At least 200mm

At least 300mm
⚠ **SUITABLE FOR MOUNTING ON CONCRETE OROTHER NON-COMBUSTIBLE SURFACE ONLY.**

Install the unit by screwing three screws
Battery Connection

CAUTION: For safety operation and regulation compliance, it's requested to install a separate DC over-current protector or disconnect device between battery and inverter. It may not be requested to have a disconnect device in some applications, however, it's still requested to have over-current protection installed. Please refer to typical amperage in below table as required fuse or breaker size.

WARNING! All wiring must be performed by a qualified personnel.
WARNING! It's very important for system safety and efficient operation to use appropriate cable for battery connection. To reduce risk of injury, please use the proper recommended cable and terminal size as below.
Ring terminal:

Recommended battery cable and terminal size:

Model	Typical Amperage	Battery capacity	Wire Size	Cable mm^2 (each)	Ring Terminal Dimensions		Torque value
					D(mm)	L(mm)	
5.2KW DC48V	135A	200AH	2*4AWG	21	8.4	33.2	5 Nm
3KW DC24V	142A	100AH	2*4AWG	21	8.4	33.2	

Please follow below steps to implement battery connection:

1. Assemble battery ring terminal based on recommended battery cable and terminal size.
2. Connect all battery packs as units requires. It's suggested to connect at least 200Ah capacity battery for 5.2KW model ; at least 100Ah capacity battery for 3KW.
3. Insert the ring terminal of battery cable flatly into battery connector of inverter and make sure the bolts are tightened with torque of 2-3 Nm. Make sure polarity at both the battery and the inverter/charger is correctly connected and ring terminals are tightly screwed to the battery terminals.

⚠	**WARNING: Shock Hazard** Installation must be performed with care due to high battery voltage in series.

⚠	**CAUTION!!** Do not place anything between the flat part of the inverter terminal and the ring terminal. Otherwise, overheating may occur. **CAUTION!!** Do not apply anti-oxidant substance on the terminals before terminals are connected tightly. **CAUTION!!**Before making the final DC connection or closing DC breaker/disconnector, be sure positive (+) must be connected to positive (+) and negative (-) must be connected to negative (-).

AC Input/Output Connection

CAUTION!! Before connecting to AC input power source, please install a separate AC breaker between inverter and AC input power source. This will ensure the inverter can be securely disconnected during maintenance and fully protected from over current of AC input. The recommended spec of AC breaker is 30A for 3KW,40A for 5.2KW.

CAUTION!! There are two terminal blocks with "IN" and "OUT" markings. Please do NOT-misconnect input and output connectors.

WARNING! All wiring must be performed by a qualified personnel.
WARNING! It's very important for system safety and efficient operation to use appropriate cable for AC input connection. To reduce risk of injury, please use the proper recommended cable size as below.

Suggested cable requirement for AC wires

Model	Gauge	Torque Value
5.2KW DC48V	8 AWG	1.4~ 1.6Nm
3KW DC24V	12 AWG	1.2~ 1.6Nm

Please follow below steps to implement AC input/output connection:

1. Before making AC input/output connection, be sure to open DC protector or disconnector first.
2. Remove insulation sleeve 10mm for six conductors. And shorten phase L and neutral conductor N 3mm.
3. Insert AC input wires according to polarities indicated on terminal block and tighten the terminal screws. Be sure to connect PE protective conductor (⏚)) first.

    (⏚) → **Ground (yellow-green)**
    L → **LINE (brown or black)**
    N → **Neutral (blue)**
⚠	**WARNING:**
	Be sure to that AC power source is disconnected before attempting to hardwire it to the unit.

4. Then, insert AC output wires according to polarities indicated on terminal block and tighten terminal screws. Be sure to connect PE protective conductor (⏚))first.

    (⏚) → **Ground (yellow-green)**
    L → **LINE (brown or black)**
    N → **Neutral (blue)**
5. Make sure the wires are securely connected.

CAUTION: Important
Be sure to connect AC wires with correct polarity. If L and N wires are connected reversely, it may cause utility short-circuited when these inverters are worked in parallel operation.

| **CAUTION:** Appliances such as air conditioner are required at least 2~3 minutes to restart because it's required to have enough time to balance refrigerant gas inside of circuits. If a power shortage occurs and recovers in a short time, it will cause damage to your connected appliances. To prevent this kind of damage, please check manufacturer of air conditioner if it's equipped with time-delay function before installation. Otherwise, this inverter/charger will trig overload fault and cut off output to protect your appliance but sometimes it still causes internal damage to the air conditioner. |

PV Connection

CAUTION: Before connecting to PV modules, please install separately a DC circuit breaker between inverter and PV modules.

WARNING! All wiring must be performed by a qualified personnel.

WARNING! It's very important for system safety and efficient operation to use appropriate cable for PV module connection. To reduce risk of injury, please use the proper recommended cable size as below.

Model	Typical Amperage	Cable Size	Torque
5.2KW DC48V	27A	10AWG	1.2 ~ 1.6 Nm
3KW DC24V	18A	12AWG	

PV Module Selection:

When selecting proper PV modules, please be sure to consider below parameters:

1. Open circuit Voltage (Voc) of PV modules not exceeds max. PV array open circuit voltage of inverter.
2. Open circuit Voltage (Voc) of PV modules should be higher than the start-up voltage.
3. Max. Power Voltage (Vmpp) of PV modules should be close to best Vmp of inverter or within Vmp range to get best performance. If one PV module can not meet this requirement, it's necessary to have several PV modules in series connection. Refer to below table.

   Note:* Vmp: panel max power point voltage.

   The PV charging efficiency is maximized while PV system voltage is close to Best Vmp.

Maximum PV module numbers in Series: Vmpp of PV module*X pcs = Best Vmp or Vmp range of Inverter

PV module numbers in Parallel: Max. charging current of inverter/Impp

Total PV module numbers=maximum PV module numbers in series*PV module numbers in parallel

Solar Charging Mode		
INVERTER MODEL	**3KW DC24V**	**5.2KW DC48V**
Max. PV Array Open Circuit Voltage	450Vdc max	
PV Array MPPT Voltage Range	150~430Vdc	
MPPT Number	1	

Recommended PV module configuration

PV Module Spec (reference) Maximum Power (Pmaxl): 425W Max. Power Voltage Vmpp(V) :38.6V Max. Power Current Impp(A) :11.02A Open Circuit Voltage Voc(V) :45.80V Short Circuit Current Isc(A) :11.81A	Total solar input power	Solar input	Q'ty of modules
	2550W	6 pieces in series	6 pcs
	3400W	8 pieces in series	8 pcs
	5100W	6pieces in series 2 strings in parallel	12 pcs
	5950W	7pieces in series 2 strings in parallel	14 pcs

Please follow below steps to implement PV module connection:
1. Remove insulation sleeve 10 mm for positive and negative conductors.
2. Check correct polarity of connection cable from PV modules and PV input connectors. Then, connect positive pole (+)of connection cable to positive pole (+) of PV input connector. Connect negative pole (-) of connection cable to negative pole (-) of PV input connector.
3. Make sure the wires are securely connected.

Final Assembly

After connecting all wirings, please put bottom cover back by screwing screws as shown below.
Communication Connection

Please use supplied communication cable to connect inverter and PC. Download the software by link on the first page of this manual into computer and follow on screen instruction to install the monitoring software.

For the detailed software operation, please consult the seller if you have any questions.

WARNING: It's forbidden to use network cable as the communication cable to directly communicate with the PC port. Otherwise, the internal components of the controller will be damaged.

WARNING: RJ45 interface is only suitable for the use of the company's supporting products or professional operation.
Below chart show RJ45 Pins definition

Pin	Definition
1	RS-485-B
2	RS-485-A
3	GND
4	CANH
5	CANL
6	
7	
8	
Dry Contact Signal

There is one dry contact (3A/250VAC) available on the rear panel. It could be used to deliver signal to external device when battery voltage reaches warning level.

Unit status	Condition			Dry contact port: NC C NO	
				NC&C	NO&C
Power Off	Unit is off and no output is powered.			Close	Open
Power On	output is powered from Utility			Close	Open
	Output is powered from Battery or Solar.	Program 01 set as utility	Battery voltage<Low DC warning voltage	Open	Close
			Battery voltage>Setting value in Program 21 or battery charging reaches floating stage	Close	Open
		Program 01 is set as SBU, SUB, solar first	Battery voltage<Setting value in Program 20	Open	Close
			Battery voltage>Setting value in Program 21 or battery charging reaches floating stage	Close	Open

OPERATION

Power ON/OFF
Once the unit has been properly installed and the batteries are connected well, simply press On/Off switch (located on the bottom of the case) to turn on the unit.

Operation and Display Panel

The operation and display panel, shown in below chart, is on the front panel of the inverter. It includes three indicators, four function keys and a LCD display, indicating the operating status and input/output power information.

LCD display   LED indicators
LED Indicator

LED Indicator			Messages
AC/INV	Green	Solid On	Output is powered by grid in Line mode.
		Flashing	Output is powered by battery or PV in battery mode.
☀ CHG	Yellow	Flashing	Battery is charging or discharging.
⚠ FAULT	Red	Solid On	Fault occurs in the inverter.
		Flashing	Warning condition occurs in the inverter.
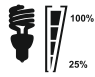

Function Keys

Function Keys	Description
MENU	Enter reset mode or setting mode go to previous selection.
UP	Increase the setting data.
DOWN	Decrease the setting data.
ENTER	Enter setting mode and Confirm the selection in setting mode go to next selection or exit the reset mode.

LCD Display Icons

Icon	Function description
Input Source Information and Output Information	
∼	Indicates the AC information
▬	Indicates the DC information
8.8.8. KW VA °C% Hz	Indicate input voltage, input frequency, PV voltage, battery voltage and charger current. Indicate output voltage, output frequency, load in VA, load in Watt and discharging current.
Configuration Program and Fault Information	
[88]	Indicates the setting programs
88 ⚠ ERROR	Indicates the warning and fault codes. Warning: 88 ⚠ flashing with warning code. Fault: 88 ERROR lighting with fault code.
Battery Information	
SLA Li CHARGING	Indicates battery level by 0-24%, 25-49%, 50-74% and 75-100% in battery mode and charging status in line mode.

In AC mode, it will present battery charging status.

Status	Battery voltage	LCD Display
Constant Current mode/Constant Voltage mode	<2V/cell	4 bars will flash in turns
	2V/cell~2.083V/cell	Bottom bar will be on and the other three bars will flash in turns.
	2.083V/cell~2.167V/cell	Bottom two bars will be on and the other two bars will flash in turns.
	>2.167V/cell	Bottom three bars will be on and the top bar will flash.
Batteries are fully charged.		4 bars will be on.

In battery mode, it will present battery capacity.		
Load Percentage	Battery Voltage	LCD Display
Load >50%	<1.717V/cell	
	1.717V/cell~1.8V/cell	
	1.8V/cell~1.883V/cell	
	>1.883 V/cell	
50%> Load>20%	<1.817V/cell	
	1.817V/cell~1.9V/cell	
	1.9 V/cell ~1.983V/cell	
	>1.983 V/cell	
Load<20%	<1.867V/cell	
	1.867V/cell~1.95V/cell	
	1.95V/cell~2.033V/cell	
	>2.033 V/cell	

Load Information

OverLoad	Indicates overload.			
100% 25%	Indicates the load level by 0-24%, 25-49%, 50-74% and 75-100%.			
	0%~24%	25%~49%	50%~74%	75%~100%

Mode Operation Information

	Indicates unit connects to the mains.
	Indicates unit connects to the PV panel.
BYPASS	Indicates load is supplied by utility power.
DC DC	Indicates the solar charger circuit is working.
DC AC	Indicates the DC/AC inverter circuit is working.

Mute Operation

	Indicates unit alarm is disabled.

LCD Setting

After pressing and holding "ENTER" button for 2 seconds, the unit will enter setting mode. Press "UP" or "DOWN" button to select setting programs. And then, press "ENTER" or "MENU" button to confirm the selection and exit.

Setting Programs:

Program	Description	Selectable option	
00	Exit setting mode	Escape `[00]ESC`	
01	Output source priority selection	(default) `[01]SUb`	Solar energy provides power to the loads as first priority, If solar energy is not sufficient to power all connected loads, Utility energy will supply power to the loads at the same time. The battery energy will supply power to the load only in the condition of the utility is unavailable. If the solar is unavailable, the utility will charge the battery until the battery voltage reaches the setting point in program 21.If the solar is available, but the battery voltage is lower than the setting point in program 20, the utility will charge the battery until the battery voltage reaches the setting point in program 20 to protect the battery from damage.
		`[01]SbU`	Solar energy provides power to the loads as first priority, If solar energy is not sufficient to power all connected loads, battery energy will supply power to the loads at the same time. Utility provides power to the loads only when battery voltage drops to either low-level warning voltage or the setting point in program 20 or solar and battery is not sufficient. The battery energy will supply power to the load in the condition of the utility is unavailable or the battery voltage is higher than the setting point in program 21(when BLU is selected) or program 20(when LBU is selected). If the solar is available, but the battery voltage is lower than the setting point in program 20, the utility will charge the battery until the battery voltage reaches the setting point in program 20 to protect the battery from damage.
		`[01]SOL`	Solar energy provides power to the loads as first priority. If battery voltage has been higher than the setting point in program 21 for 5 minutes, and the solar energy has been available for 5 minutes too, the inverter will turn to battery mode, solar and battery will provide power to the loads at the same time. When the battery voltage drops to the setting point in program 20, the inverter will turn to bypass mode, utility provides power to the load only, and the solar will charge the battery at the same time.
		`[01]Uti`	Utility will provide power to the loads as first priority. Solar and battery energy will provide power to the loads only when utility power is not available.

14

02	AC input voltage range	Appliances (default) `[02] APL`	If selected, acceptable AC input voltage range will be within 90-280VAC.
		UPS `[02] UPS`	If selected, acceptable AC input voltage range will be within 170-280VAC.
		GEN `[02] GEN`	When the user uses the device to connect the generator, select the generator mode.
		VDE `[02] VdE`	If selected, acceptable AC input voltage range will conform to VDE4105 (184VAC-253VAC)
03	Output voltage	`[03] 230 v`	Set the output voltage, (220VAC-240VAC)
04	Output frequency	50HZ(default) `[04] 50.0 Hz`	60HZ `[04] 60.0 Hz`
05	Solar supply priority	(default) `[05] bLU`	Solar energy provides power to charge battery as first priority. When the utility is available, if the battery voltage is lower than the setting point in program 21, the solar energy will never supply to the load or feed into the grid, only charge the battery. If the battery voltage is higher than the setting point in program 21, the solar energy will supply to the load or feed into the grid or recharge the battery.
		`[05] LbU`	Solar energy provides power to the loads as first priority. If the battery voltage is lower than the setting point in program 20, the solar energy will never supply to the load or feed into the grid, only charge the battery. If the battery voltage is higher than the setting point in program 20, the solar energy will supply to the load or feed into the grid or recharge the battery.
06	Overload bypass: When enabled, the unit will transfer to line mode if overload occurs in battery mode.	Bypass disable `[06] bYd`	Bypass enable(default) `[06] bYE`
07	Auto restart when overload occurs	Restart disable(default) `[07] Lrd`	Restart enable `[07] LrE`
08	Auto restart when over temperature occurs	Restart disable(default) `[08] trd`	Restart enable `[08] trE`
10	Charger source priority: To configure charger source priority	If this inverter/charger is working in Line, Standby or Fault mode, charger source can be programmed as below:	
		Solar first `[10] CSO`	Solar energy will charge battery as first priority. Utility will charge battery only when solar energy is not available.
		Solar and Utility(default) `[10] SnU`	Solar energy and utility will charge battery at the same time.

		Only Solar `[10]050`	Solar energy will be the only charger source no matter utility is available or not.
		If this inverter/charger is working in Battery mode, only solar energy can charge battery. Solar energy will charge battery if it's available and sufficient.	
11	Maximum charging current: To configure total charging current for solar and utility chargers.(Max. charging current =utility charging current + solar charging current)	80A (default) `[11] 80` ^	Setting range is from 1A to 80A for PV 80A Charge/Setting range is from 1A to 100A for PV 100A Charge. Increment of each click is 1A.
13	Maximum utility charging current	30A (default) `[13] 30` ^	Setting range is from 1A to 60A for PV 80A Charge/Setting range is from 1A to 80A for PV 100A Charge. Increment of each click is 1A.
14	Battery type	AGM (default) `[14]AGn`	Flooded `[14]FLd`
		GEL `[14]GEL`	LEAD `[14]LEA`
		Lithium Ion `[14]Li`	User-Defined `[14]USE`
		If"User-Defined" or"LI" is selected,When the lithium battery and the inverter do not communicate properly,the battery icon □ will flash. If"LI" is selected and the battery icon does not flash,program of 11,17,18 will be set automatically,No need for further setting. If"User-Defined" is selected and the battery icon does not flash battery charge voltage and charge current can be set up in program 11,17 and 18.	
17	Bulk charging voltage (C.V voltage)	24V model default setting: 28.2V `[17]CV 28.2` v	
		If "User-Defined" or"LI" selected in program 14, this program can be set up. Setting range is from 24.0V to 29.2V for 24Vdc model. Increment of each click is 0.1V.	
		48V model default setting: 56.4V `[17]CV 56.4` v	
		If "User-Defined" or"LI" selected in program 14, this program can be set up. Setting range is from 48.0V to 58.4V for 48Vdc model. Increment of each click is 0.1V.	
18	Floating charging voltage	24V model default setting: 27.0V `[18]FLV 27.0` v	
		If "User-Defined" or"LI" selected in program 14, this program can be set up, Setting range is from 24.0V to 29.2V for 24Vdc model. Increment of each click is 0.1V.	
		48V model default setting: 54.0V `[18]FLV 54.0` v	
		If "User-Defined" or"LI" selected in program 14, this program can be set up, Setting range is from 48.0V to 58.4V for 48Vdc model. Increment of each click is 0.1V.	

19	Low DC cut-off voltage or SOC percentage	24V model default setting: 20.4V
		`[19]COV 20.4` v
		If "User-Defined" or"LI" is selected in program 14, this program can be set up. Setting range is from 20.0V to 24.0V for 24Vdc model. Increment of each click is 0.1V. Low DC cut-off voltage will be fixed to setting value no matter what percentage of load is connected.
		48V model default setting: 40.8V
		`[19]COV 40.8` v
		If "User-Defined" or"LI"is selected in program 14, this program can be set up. Setting range is from 40.0V to 48.0V for 48Vdc model. Increment of each click is 0.1V. Low DC cut-off voltage will be fixed to setting value no matter what percentage of load is connected.
		SOC 10% (default)
		`SOC [19] 10` %
		If"User-Defined" or"LI"is selected in program 14,and the SOC percentage method is selected in program 37 ,the low DC cut-off SOC percentage will be able to be set.Low DC cut-off SOC percentage will be fixed to setting value no matter what percentage of load is connected Setting range is from 0%-90%. Increment of each click is 1%

20	Battery stop discharging voltage when grid is available	Available options for 24V models:	
		24.0V (default) `[20]24.0` v	Setting range is from 22.0V to 29.0V. Increment of each click is 0.1V.
		Available options for 48V models:	
		48.0V (default) `[20]48.0` v	Setting range is from 44.0V to 58.0V. Increment of each click is 0.1V.

21	Battery stop charging voltage when grid is available	Available options for 24V models:	
		27.0V (default) `[21]27.0` v	Setting range is from 22.0V to 29.0V. Increment of each click is 0. 1V.
		Available options for 48V models:	
		54.0V (default) `[21]54.0` v	Setting range is from 44.0V to 58.0V. Increment of each click is 0. 1V.

22	Auto turn page	(default) `[22]PtE`	If selected, the display screen will auto turn the display page.
		`[22]Ptd`	If selected, the display screen will stay at latest screen user finally switches.

23	Backlight control	Backlight on `[23]LON`	Backlight off (default) `[23]LOF`

24	Alarm control	Alarm on (default) `[24]bON`	Alarm off `[24]bOF`

17
25	Beeps while primary source is interrupted	Alarm on `[25]ANM`	Alarm off (default) `[25]AOF`
27	Record Fault code	Record enable(default) `[27]FON`	Record disable `[27]FOF`
29	Power saving mode enable/disable	Saving mode disable（default） `[29]SdS`	If disable, no matter connected load is low or high, the on/off status of inverter output will not be effected.
		Saving mode enable `[29]SEN`	If enable, the output of inverter will be off when connected load is pretty low or not detected.
30	Battery equalization	Battery equalization `[30]EEN`	Battery equalization disable(default) `[30]EdS`
31	Battery equalization voltage	Available options for 24V models:28.8V `[31]EV 28.8 V`	
		Available options for 48V models:57.6V `[31]EV 57.6 V`	
		Setting range is from 24.0V to 29.2V for 24V model and 48.0V to 58.4V for 48V model. Increment of each click is 0.1V.	
33	Battery equalization time	60min(default) `[33] 60`	Setting range is from 5min to 900min. Increment of each click is 5min.
34	Battery equalization timeout	120min(default) `[34] 120`	Setting range is from 5min to 900min. Increment of each click is 5min.
35	Equalization interval	30days(default) `[35]30d`	Setting range is from 0 to 90days. Increment of each click is 1 day.
36	Equalization activated immediately	Enable `[36]AEN`	Disable(default) `[36]AdS`
		If equalization function is enabled in program 30, this program can be set up. If "Enable"is selected in this program, it's to activate battery equalization immediately and LCD main page will shows" `E9` ". If "Disable"is selected, it will cancel equalization function until next activated equalization time arrives based on program 35 setting. At this time, " `E9` " will be shown in LCD main page too.	
37	BMS control method	Voltage method(default) `[37]VOL`	SOC Percentage method `[37] SOC`
38	Battery stop discharging percent When SOC is available	20 % （default) `[38] 20 %`	Setting range is from 5%-95% Increment of each click is 1%.
39	Battery stop charging percent When SOC is available	95 % （default) `[39] 95 %`	Setting range is from 10%-100% Increment of each click is 1%.
| 40 | BMS communication | (default)
[40] idP | when the communication between BMS and converter is faulted ,the converter still charge or discharge from the battery. |
		[40] Uni	when the communication between BMS and converter is faulted ,the converter stop charging or discharging from the battery.
41	Lithium battery protocol	SEL[41] 0	Setting range is from 0 to 31 Increment of each click is 1.
		If "LI" is selected in program 14, program 41 can be set. After the program 41 is set,please restart the inverter to take effect.For example,if you set the program 41 to 0,the inverter can communicate with the must lithium battery.	

After pressing and holding "MENU" button for 6 seconds,the unit will enter reset model. Press "UP" and "DOWN" button to select programs. And then, press "ENTER" button to exit.

| SEt | (default)
[dt]ntt | Reset setting disable |
| | [dt]tSt | Reset setting enable |

Fault Reference Code
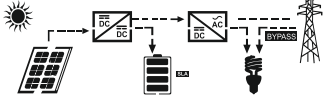

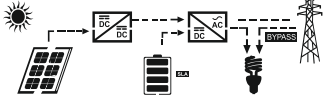

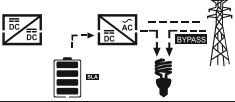

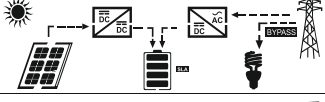

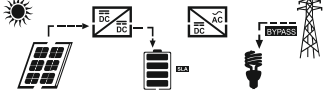

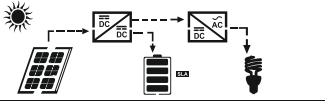

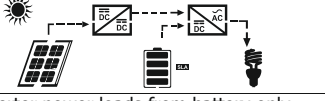

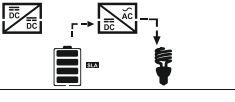

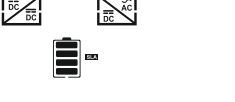

Fault Code	Fault Cause	LCD Indication
01	Fan is locked when inverter is on	[01] ⚠ ERROR
02	Inverter transformer over temperature	[02] ⚠ ERROR
03	Battery voltage is too high	[03] ⚠ ERROR
04	Battery voltage is too low	[04] ⚠ ERROR
05	Output short circuited	[05] ⚠ ERROR
06	Inverter output voltage is high	[06] ⚠ ERROR
07	Overload time out	[07] ⚠ ERROR
08	Inverter bus voltage is too high	[08] ⚠ ERROR
09	Bus soft start failed	[09] ⚠ ERROR
11	Main relay failed	[11] ⚠ ERROR
21	Inverter output voltage sensor error	[21] ⚠ ERROR
22	Inverter grid voltage sensor error	[22] ⚠ ERROR

33	Solar charger current is uncontrollable	[33] ⚠ ERROR
41	Inverter grid voltage is low	[41] ⚠ ERROR
42	Inverter grid voltage is high	[42] ⚠ ERROR
43	Inverter grid under frequency	[43] ⚠ ERROR
44	Inverter grid over frequency	[44] ⚠ ERROR
51	Inverter over current protectionerror	[51] ⚠ ERROR
52	Inverter bus voltage is too low	[52] ⚠ ERROR
53	Inverter soft start failed	[53] ⚠ ERROR
55	Over DC voltage in AC output	[55] ⚠ ERROR
56	Battery connection is open	[56] ⚠ ERROR
57	Inverter control current sensor error	[57] ⚠ ERROR
58	Inverter output voltage is too low	[58] ⚠ ERROR

Warning Indicator

Warning Code	Warning Event	Icon flashing
61	Fan is locked when inverter is on.	61 ⚠ ERROR
62	Fan 2 is locked when inverter is on.	62 ⚠ ERROR
63	Battery is over-charged.	63 ⚠ ERROR
64	Low battery	64 ⚠ ERROR
67	Overload	67 ⚠ ERROR 💡 100% 25%
70	Output power derating	70 ⚠ ERROR
72	Solar charger stops due to low battery	72 ⚠ ERROR
73	Solar charger stops due to high PV voltage	73 ⚠ ERROR
74	Solar charger stops due to over load	74 ⚠ ERROR
75	Solar charger over temperature	75 ⚠ ERROR
76	PV charger communication error	76 ⚠ ERROR
77	Parameter error	77 ⚠ ERROR

Operating State Description

Operating State	Description	LCD display
Match load state Note: DC power produced from your solar array is converted by the inverter into AC power, which is then sent to your main electrical panel to be used by your household appliances. Any excess power generated is not sold back to the grid, but stored in battery.	PV energy is charger into the battery or convertered by the inverter to the AC load	PV energy power is larger than inverter power PV energy power is smaller than inverter power PV is off
Charge state	PV energy and grid can charge batteries.	
Bypass state	Error are caused by inside circuit error or external reasons such as over temperature, output short circuited and so on.	
Off-Grid state	The inverter will provide output power from battery and PV power.	Inverter power loads from PV energy. Inverter power loads from battery and PV energy. Inverter power loads from battery only.
Stop mode	The inverter stop working if you turn off the inverter by the soft key or error has occurred in the condition of no grid.	

Display Setting

The LCD display information will be switched in turns by pressing "UP" or "DOWN" key. The selectable information is switched as below order: battery voltage, battery current, inverter voltage, inverter current, grid voltage, grid current, load in Watt, load in VA, grid frequency, inverter frequency, PV voltage, PV charging power, PV charging output voltage, PV charging current.

Selectable information	LCD display
Battery voltage/DC discharging current	BATT **26.0** V **48.0** A
Inverter output voltage/Inverter output current	**229** V INV **13.0** A
Grid voltage/Grid current	**229** V GRID **8.0** A
Load in Watt/VA	**1.00** KW LOAD **1.20** K VA
Grid frequency/Inverter frequency	INPUT **50.0** Hz INV **50.0** Hz
PV voltage and PV charging current	INPUT PV **360** V **8.06** A
PV charger output voltage and PV power	PV **430** V OUTPUT **3.20** KW

SPECIFICATIONS

Table 1 Line Mode Specifications

INVERTER MODEL	3KW DC24V	5.2KW DC48V
Input Voltage Waveform	Sinusoidal (utility or generator)	
Nominal Input Voltage	230Vac	
Low Loss Voltage	90Vac±7V(APL,GEN);170Vac±7V(UPS); 186Vac±7V(VDE)	
Low Loss Return Voltage	100Vac±7V(APL,GEN);180Vac±7V(UPS); 196Vac±7V(VDE)	
High Loss Voltage	280Vac±7V(UPS,APL,GEN); 253Vac±7V(VDE)	
High Loss Return Voltage	270Vac±7V(UPS,APL,GEN); 250Vac±7V(VDE)	
Max AC Input Voltage	300Vac	
Nominal Input Frequency	50HZ/60HZ(Auto detection)	
Low Loss Frequency	40HZ±1HZ(UPS,APL,GEN); 47.5HZ±0.05HZ(VDE)	
Low Loss Return Frequency	42HZ±1HZ(UPS,APL,GEN); 47.5HZ±0.05HZ(VDE)	
High Loss Frequency	65HZ±1HZ(UPS,APL,GEN); 51.5HZ±0.05HZ(VDE)	
High Loss Return Frequency	63HZ±1HZ(APL,GEN,UPS); 50.05HZ±0.05HZ(VDE)	
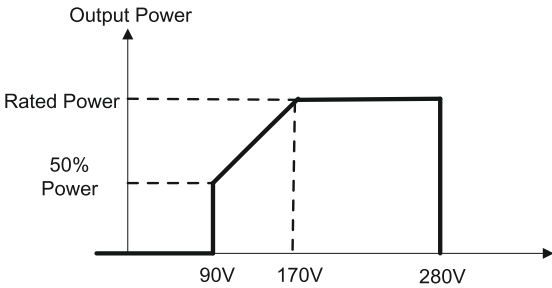

Output Short Circuit Protection	Line mode: Circuit Breaker Battery mode: Electronic Circuits
Efficiency (Line Mode)	>95%(Rated R load, battery full charged)
Transfer Time	10ms typical (UPS,VDE) 20ms typical (APL) 50ms typical (For parallel operation)
Output power derating: When AC input voltage drops to 95V or 170V depending on models, the output power will be derated.	230Vac model: Output Power Rated Power 50% Power 90V 170V 280V

Table 2 Inverter Mode Specifications

INVERTER MODEL	3KW DC24V	5.2KW DC48V
Rated Output Power	3000W	5200W
Output Voltage Waveform	Pure Sine Wave	
Output Voltage Regulation	230Vac±5%	
Output Frequency	60Hz or 50Hz	
Peak Efficiency	90%	
Overload Protection	5s@≥150% load; 10s@110%~150% load	
Nominal DC Input Voltage	24Vdc	48Vdc
Cold Start Voltage	23.0Vdc	46.0Vdc
Low DC Warning Voltage		
@ load < 20%	22.0Vdc	44.0Vdc
@ 20% ≤ load < 50%	21. 4Vdc	42.8Vdc
@ load ≥ 50%	20.2Vdc	40.4Vdc
Low DC Warning Return Voltage		
@ load < 20%	23.0Vdc	46.0Vdc
@ 20% ≤ load < 50%	22.4Vdc	44.8Vdc
@ load ≥ 50%	21.2Vdc	42.4Vdc

Low DC Cut-o ffVoltage		
@ load < 20%	21.0Vdc	42.0Vdc
@ 20% ≤ load < 50%	20.4Vdc	40.8Vdc
@ load ≥ 50%	19.2Vdc	38.4Vdc
High DC Recovery Voltage	29Vdc	58Vdc
High DC Cut-off Voltage	30Vdc	60Vdc

Table 3 Charge Mode Specifications

Utility Charging Mode			
INVERTER MODEL		3KW DC24V	5.2KW DC48V
Charging Current @ Nominal Input Voltage		60Amax/80Amax	
Floating charging voltage	AGM / Gel/LEAD Battery	27.4Vdc	54.8Vdc
	Flooded battery	27.4Vdc	54.8Vdc
Bulk charging voltage (C.V voltage)	AGM / Gel/LEAD Battery	28.8Vdc	57.6Vdc
	Flooded battery	28.4Vdc	56.8Vdc
Charging Algorithm		3-Step(Flooded Battery, AGM/Gel/LEAD Battery), 4-Step(LI)	
Solar Charging Mode			
INVERTER MODEL		3KW DC24V	5.2KW DC48V
Rated Power		4000W	6000W
MPPT charger			
solar charging current		80Amax/100Amax	
Max.PV Array Open Circuit Voltage		450Vdc max	
PV Array MPPT Voltage Range		150~430Vdc	
Min battery voltage for PV charge		17Vdc	34Vdc
Battery Voltage Accuracy		+/-0.3%	
PV Voltage Accuracy		+/-2V	
Charging Algorithm		3-Step(Flooded Battery, AGM/Gel/LEAD Battery), 4-Step(LI)	
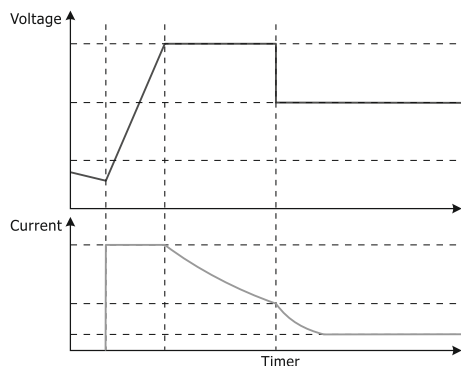

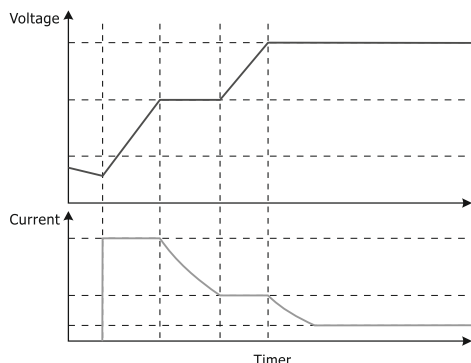

Charging algorithm for lead acid battery	
Charging algorithm for Lithium battery	

Joint Utility and Solar Charging

INVERTER MODEL	3KW DC24V	5.2KW DC48V
Max Charging Current	80A/100A	
Default Charging Current	60A/80A	

Table 4 General Specifications

INVERTER MODEL	3KW DC24V	5.2KW DC48V	
Safety Certification	CE		
Operating Temperature Range	-10℃ to 50℃		
Storage temperature	-15℃~ 60℃

Net Weight, kg	8	13	14.4

TROUBLE SHOOTING

Problem	LCD/LED/Buzzer	Explanation / Possible cause	What to do
Unit shuts down automatically during startup process.	LCD/LEDs and buzzer will be active for 3 seconds and then complete off.	The battery voltage is too low (< 1.91V/Cell)	1. Re-charge battery. 2. Replace battery.
No response after power on.	No indication.	1. The battery voltage is far too low (<1.4V/Cell) 2. Battery polarity is connected reversed. Input protector is tripped	1. Check if batteries the wiring are connected and well. 2. Re-charge battery. 3. Replace battery.
Mains exist but the unit works in battery mode.	Input voltage is displayed as 0 on the LCD and green LED is flashing.	Input protector is tripped	Check if AC breaker is tripped and AC wiring is connected well.
	Green LED is flashing.	Insufficient quality of AC power (Shore or Generator)	1. Check if AC wires are too thin and/or too long. 2. Check if generator (if applied) is working well or if input voltage range setting is correct.(Appliance=>wide)
When the unit is turned on, internal relay is switched on and off repeatedly.	LCD display and LEDs are flashing	Battery is disconnected.	Check if battery wires are connected well.
Buzzer beeps continuously and red LED is on.	Fault code 07	Overload error. The inverter is overload 110% and time is up.	Reduce the connected load by switching off some equipment.
	Fault code 05	Output short circuited.	Check if wiring is connected well and remove abnormal load.
	Fault code 02	Internal temperature of inverter component is over 90℃.	Check whether the air flow of the unit is blocked or whether the ambient temperature is too high.
	Fault code 03	Battery is over-charged.	Return to repair center.
		The battery voltage is too high.	Check if spec and quantity of batteries are meet requirements.
	Fault code 01	Fan fault	Replace the fan.
	Fault code 06/58	Output abnormal (Inverter voltage below than 202Vac or is higher than 253Vac)	1. Reduce the connected load. 2. Return to repair center
	Fault code 08/09/53/57	Internal components filed.	Return to repair cente
	Fault code 51	Over current or surge	Restart the unit, if the error happens again, please return to repair center.
	Fault code 52	Bus voltage is too low	
	Fault code 55	Output voltage is unbalanced	
	Fault code 56	Battery is not connected well or fuse is burnt.	If the battery is connected well, please return to repair center.

WARRANTY CARD

DATE OF PURCHASE	
SHIPPING ADDRESS

DAMAGE DESCRIPTION	
SERVICE COMMENTS	

FILL IN IF NEEDEED
(*) Cross incorrect
I agree to pay the cost of inverter repair due to:
* expiration of the warranty period / * warranty void

Before proceeding with the repair, service will inform by phone about the exact costs of the repair.
Please attach a copy of the purchase document (receipt or invoice) to the complaint.
The full regulations of service repairs can be found on our website **www.voltpolska.pl**

Proper disposal of the product
(waste electrical and electronic equipment)

The marking placed on the product or in the texts related to it indicates that it should not be disposed of with other household waste at the end of its useful life. To avoid harmful effects to the environment and human health from uncontrolled disposal, please separate this product from other types of waste and recycle responsibly to promote the reuse of material resources as a continuing practice. For information on where and how to recycle this product in an environmentally safe manner, residential users should contact the retailer where they purchased the product, or their local government authority. Business users should contact their supplier and check the terms and conditions of their purchase contract. The product should not be disposed of with other commercial waste.
