

BATTERY CHARGER

SMART 12V/24V 15A A20 BLACK

The **SMART 12V/24V 15A A20 BLACK** is a battery charger with microprocessor-based control system using PWM technology.

Capable of charging 12V and 24V batteries and allows to choose non-standard battery voltages.

Thanks to intelligent parameter settings the battery charger allows to regenerate a discharged battery.

Main features:

- Automatic charger designed for charging 12V and 24V lead-acid AGM and GEL batteries.
- Continuous system testing and switching between 4 charging modes (Constant Voltage; Constant Current; Trickle Charge Modulation; Floating Charge Modulation) that regenerates the battery.
- Multi-stage battery protection thanks to an advanced microcomputer management system.
- Guarantee that batteries won't be damaged by sulphurisation, precipitation and water loss.
- Overheating protection.
- Short-circuit protection.
- Reverse-connecting protection.

Main features:

MODEL	SMART 12V/24V 15A A20
Charging current	0-15A
Input voltage	110VAC-250VAC
Output voltage	12V/24V
Output voltage frequency	50/60Hz
Charging voltage	12V(2±14,5V)24V(18V±29V)
Ambient temperature	-30°C do +50°C
Dimensions	20,5x13,6x7,8cm
Weight	0,9kg
Gross dimensions	23x19x11,8cm
Gross weight	1,05kg
Multipack dimensions	52x44x57,5cm
Multipack weight	22,5kg
