

# ELECTRIC OUTBOARD VOLT POLSKA

## BRYZA 65

The outboard electric motor **Bryza 65** is designed to power boats and operate in shallow water. Due to the column strengthened by composite material, the device is resistant to impact and deformation.

When working with this type of engine powered by **12V, AGM and GEL batteries** with appropriate capacity are the best to choose from (the battery must be able to supply the engine with a current of at least 50-60A).

Low weight, easy assembly and quiet operation of the device. All essential engine parts are contained in a compact unit.

### Main features:

|  |
|--|
| Extendable handle feat. forward/reverse option/speed control |
| 5 forward/ 3 reverse speed                                   |
| 3 blade propeller  |
| LED display showing the voltage of battery (W)               |
| Powered by AGM/GEL battery                                   |
| Column strengthened by composite material                    |
| Quick and light installation                                 |
| Quiet work   |

### Usage of product:

|               |
|---------------|
| Motor boats   |
| Fishing boats |
| Sailing boats |

### Technical data:

|                                  |                      |
|----------------------------------|----------------------|
| Power                            | 700W +3%             |
| Power voltage                    | 12VDC                |
| Max current                      | 60A +3%              |
| Weight                           | 10kg                 |
| Dimension/Weight single package  | 116/38/18cm / 10,5kg |
| Dimension/Weight collect package | 25CMB / 3185kg       |

### Elements:

1. Control box
2. Battery voltage display
3. Extendable handle feat. forward/reverse option/speed control
4. Quick tilt device
5. Motor
6. 3 blade propeller
7. Multi adjustable depth feature

INDEKS: 3ZSIL60LBS

EAN: 5903760240103

Extendable handle

Motor head to adjust the angle of the motor
